

# UCS & 470

## Exceptional Dirt Removal

### HEPA filtration available

Both the UCS and 470 can be fitted with HEPA filtration, offering the best protection from airborne particles for operatives and building users. This ensures that both machines exceed the HEPA standard IEC60312, the only international standard available for the measurement of air filtration efficiency of vacuum cleaners for household and similar use. The test is performed with the complete vacuum cleaner mounted inside a sealed test rig specified by the standard. The cleaner inlet is dosed with measured amounts of standard dust, and particles in the discharge air are counted into six separate size bands down to 0.3 microns. The test approximates to actual use conditions and the results are standardised as a single percentage efficiency figure enabling the direct comparison of one vacuum cleaner with another.

### Extendable Hose for high level vacuuming

Both the UCS and 470 feature a flexi-hose and down tube that when used together with the crevice tool or round dusting brush let you clean in difficult to reach areas.

### Available in two sizes

The Victor UCS has a cleaning width of 370 mm or for a larger area the 470 provides a cleaning width of 470 mm.

### Dual Motor for maximum dust and grit removal

The UCS and 470 both have vacuum and brush motor's. The brush grooms the carpet and provides a significantly deeper clean with more dirt removal than a standard single motor vacuum cleaner.

The UCS and 470 utilise both a vacuum and brush motor to provide an extremely deep vacuum clean.

Technical Data		
Product Code	V-UCS	V-470
Productivity (m <sup>2</sup> / hr)	250	320
Voltage (V)	240	240
Motor Power (Watts)	Vac:850 Brush: 300	Vac: 850 Brush: 300
Airflow (l/s)	25	25
Waterlift (mm)	1650	1650
Noise Level (dBA)	73	73
Weight (kg)	9.2	9.7
Capacity (litres)	4	4
Cable length (m)	12.5	12.5
Cleaning Width (mm)	370	470

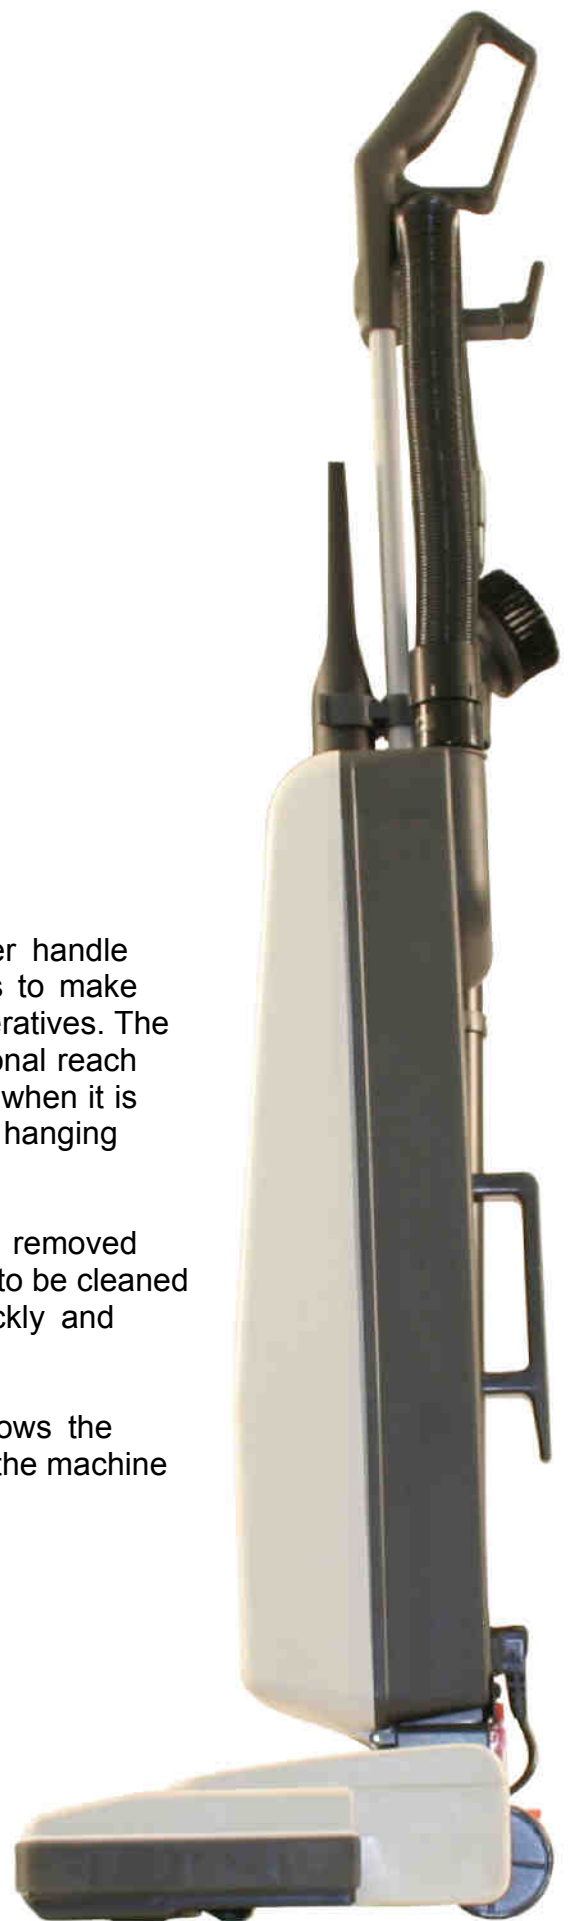

The UCS offers dramatically lower handle weight than many other machines to make operation more comfortable for operatives. The longer handle also provides additional reach with the machine especially useful when it is fully lowered to reach under low hanging shelving or tables.

The brush roll on the UCS can be removed without the use of tools, allowing it to be cleaned and blockages to be cleared quickly and effectively.

The quick release cable hook allows the operator to remove the cable from the machine quickly and easily.
