

BATTERY BACK PACK VACUUM

Commercial Vacuum Cleaner

The Victor Back Vacuum Cleaner is a compact, lightweight and easy to use battery powered vacuum cleaner.

The high comfort harness allows operatives to wear for prolonged periods without strain. Ideal for environments where trailing cables reduces productivity, for example cinemas or trains.

The lithium battery has a life cycle of approx 2,000 cycles. These Lithium batteries guarantee up to 65 minutes of working time and fast recharging times (about 1h). With no "memory effect": the batteries can be charged at any time, even partially, without any risk of damage.

The dual power mode is ideal for varying runtimes, and increasing power when required.

The Victor Back Vacuum Cleaner is supplied with both an extendable wand tool and floor tools, making it adaptable to any vacuuming task.

✓ Fast Charge & long Runtimes

65 minutes of working time and fully recharged in approx 1h.

✓ Simple, but built to last

Designed to sustain years of demanding use.

✓ Easy to Use

Simple to use single switch and intuitive design.
